

## MODEL 60L DRIVEN LOWER LIFTERS

Angelus offers a complete package to convert the 60L lower turret to gear driven lower lifters with an improved seven-point lubrication system that minimizes the time required to lubricate the machine.

### Improve Productivity

Changing to gear driven lower lifters on the 60L Seamer offers increased production, improved seam integrity, reduced scuffing of bottom of cans, reduced pressure of lower chuck on cans, reduced slipping of cans on the seaming chuck and it greatly improves the application for seaming light weight containers and cover material.

The model 60L Seamer conversion is available for standard can applications as well as special ones such as high lift aerosol or reduced lift 202MS diameter beverage can applications. The gear driven lower lifters provide the processor with several advantages that improve productivity and are a standard feature on new 60L Seamers.

### Rely on Angelus

Take advantage of our in-house expertise and rely on Angelus to rebuild your 60L Seamer at our Los Angeles plant. We can update your machine at the same time with our Driven Lower Lifter Conversion and our Single Disc Cover Separator Conversion, which utilizes our new cap guide rail bracket.

Conversion or Standard on Angelus 60L Seamer

### Advantages & Benefits

- Improves productivity by minimizing downtime and product waste
- Provides a solution for seaming lighter weight cans and cover material
- Reduces slipping and scuffing of cans
- Reduces amount of pressure required to hold can
- Improves seam integrity
- Quick and easy lubrication of lower turret
- Conversion available with pre-aligned upper and lower turret
