

Remanufactured Machines

Remanufactured machines are previously used baggers that are returned to factory-new condition and provided with the same warranty as a new machine.

Process

- Machines are stripped down to frame
- Painted parts are sandblasted, resurfaced where needed, cleaned, and factory repainted
- Stainless steel parts are acid washed and fine pad sanded to bring out a new finish
- Anodized aluminum parts are sandblasted, resurfaced where needed, cleaned, and re-anodized with our standard factory process
- Electrical and wear parts are replaced with new components
- Non-electrical and non-wear parts are restored to as-new condition or replaced with new components
- Machine goes through the same assembly, test, and verification process as a new machine

Items Included

- Remanufactured machines have the same available features and options as our new machines
- Vintage features and options are also available

Advantages

- New machine technology
- New machine performance
- New machine reliability
- New machine warranty
- Priced less than a comparable new machine
